

Obstetrical Trauma

Okay I'm pregnant. How does that change anything?

Cardiovascular

- Increased blood volume
- Decreased blood pressure
- Supine Hypotensive Syndrome

Hematologic

- Dilutional anemia
- Leukocytosis
- Increased fibrinogen

Neurological

- No alteration is normal
- Consider increased ICP
- Consider eclampsia

Pulmonary

- Increased minute volume
- Decreased functional residual capacity
- Increased oxygen consumption
- Compensated respiratory alkalosis

Musculoskeletal

- Pelvis becomes more flexible
- Symphysis pubis and sacral ligaments loosen

Gastrointestinal

- Abdominal organ displacement
- Decreased gastric motility and increased emptying times
- Increased gastric secretions

Genitourinary

- Elevated bladder
- Urinary frequency
- Urinary stasis
- Decreased urine concentration
